

## Migration safe solution Format & standards

Migration safe labels have been designed for blood donation centers in order to overprint data and barcodes. These labels are used also for labelling sets of laboratory tests, as well as overprinting patient data and bar codes. They exhibit water resistance, as well as centrifugation and temperature ranging from - 50°C to +80°C. Labels are flexible, can be matched to the shape of the blood bag and provide easy scanning of the barcode. The non-migrating adhesive used here is characterized by high initial cohesion, excellent adhesion and efficiency in low temperature – on a wide range of bases, including non-polar surfaces. Labels are also designed for a long-term storage of material.

SHAPE	SIZE (mm)	PRODUCTS
	40 x 15	 
	50,8 x 50,8	
	101,6 x 101,6
